KeyMacro is a software solution which aims to simplify the recording and editing of MIDI sequences, so that you can create your own Virtual Instruments and programs easily. KeyMacro With KeyMacro you can create MIDI sequences, edit them on a MIDI sequencer and perform them with the help of MIDI instruments, by using macros. The software includes a few built-in instruments, but you can also install any MIDI instrument you like and even add your own. This software solution is not only capable of recording MIDI sequences in various formats, including SMF, MIDIseq, raw files, audio files and more, but it also has the ability to edit and process these files, such as making MIDI files compatible with virtual instruments, or combining multiple MIDI files into a single file. The MIDI editing engine has been improved, so that it can now work with files from several applications, such as Roland A-series, AKAI S1000, and many other models. In addition, you can use this solution to perform virtual instruments, by connecting the software with a keyboard, or else connect it to other programs to allow you to create multiple MIDI sequences at once. As its name implies, this application is built for Mac users only. In other words, if you have a PC, you will not be able to use this software. Unfortunately, the software lacks an activation key, which can be set in the 'Preferences' window. While the main window of OneManBand is 'PC Keyboard 1', from the 'Windows' menu of the utility, you can switch between that and 'PC Keyboard 2' or 'MIDI Keyboard', which can be used for auto-accompaniment, as well as 'Voices', 'Stylemaker', 'Song', 'Arranger', 'Sequencer', 'Karaoke' and 'Stpl', each providing a different layout and a distinct set of functions. Record, play and arrange your styles From the 'PC Keyboard 1', you can play a chord to start the accompaniment and record the rendered sounds, inserting pitch bends or other alterations. In the 'PC Keyboard 2', you can organize the keys and their corresponding functions, while the 'MIDI Keyboard' allows you to manage the keys' positions. The 'Stylemaker' section of OneManBand enables you to record or play files, while the 'Voices' window lets you choose the instruments you want to work with and adjust their 'Modulation', 'Brightness', 'Resonance', 'Attack Time' or 'Release Time'.
